THE SEARCH PROJECT

PROGRAMME TEAM - WINDOWS 10 DEPLOYMENT

We were engaged to support a client who needed to deliver a Windows 10 landside deployment for 600+ devices across two offices within a two month time frame at a major UK airport.

By conducting values based and technical interviews across a range of roles including Lead Engineer, Application Packagers, Build Engineers, Business Change Manager, Schedulers, Floorwalkers and Trainers we were able to build a cohesive team within 10 days.

We also scheduled a pre-engagement briefing, enabling the team to meet, understand the scope of work and timeframes prior to kick off.

CONCLUSION

The phase 1 deployment was delivered both on time and on budget, which led to being awarded the Phase 2 and 3 roll outs.
